These guidelines may only be used for Saipan

## HOW BIG SHOULD A NEW TANK BE? <br> IS YOUR OLD TANK BIG ENOUGH?

## This booklet provides answers to FOUR QUESTIONS:

- What should the water in your storage tank be USED FOR?
- How much water does your family use?
- How BIG of a NEW rainwater storage tank should you get?
- Is your OLD rainwater storage tank BIG enough?

## In the home, the SIX MAIN USES OF WATER are:

- Drinking
- Cooking
- Washing dishes
- Bathing
- Washing clothes
- Flushing toilets

## Here are some RULES:

- ALWAYS use the water in your rainwater storage tank according to a USE RATE you have decided on.
- NEVER use the water in your rainwater storage tank for bathing.

So, we have almost answered the question "What should the water in your rainwater storage tank be used for?"

## THE USE RATE

It is very important to determine how much water your family uses. This is called the use rate. Your family's use rate will help you determine the size of tank your home requires. If you are unable to estimate your family's use rate then you can use the results
of a survey that was made in Saipan in 1999. For example, if your family uses tank water only for drinking cooking and washing dishes the average use rate for Saipan is $4 \mathrm{Gal} / \mathrm{Day}$ / Person. Average values for various other uses are shown below.

- 1 Gal / Day / Person: Only use tank water for drinking and cooking.
- 4 Gal / Day / Person: Only use tank water for drinking, cooking, and washing dishes.
- 20 Gal / Day / Person: Only use tank water for drinking, cooking, washing dishes, and toilet flushing or washing clothes.
- 30 Gal / Day / Person: Only use tank water for drinking, cooking, washing dishes, toilet flushing, and washing clothes.
- The survey evaluation found that the use rate for bathing was very high. This high use rate rules out the use of rain catchment tanks as a source of bathing water in Saipan.

The intended uses mentioned for each of the rates above are only suggestions. As long as your family's total consumption per person does not exceed the listed use rate value, the tank size will be adequate. Using the water for other needs than specified may result in an empty tank especially during the dry seasons.

A computer program was designed to evaluate tank size and use rate combinations that produce the best long term sustainable supply. Computer runs were made using Saipan rainfall values taken from the gage at the International Airport in Saipan from 1954 to 1999.

## CHARTS FOR TANK SIZING

The following chart lists the common tank sizes sold locally. Tanks of 1,000 gallons or more are constructed of reinforced concrete. The most common shape is cylindrical, although in some cases oval shapes are available. The 250 and 500 -gallon tanks are available in various materials.

| Tank Size (gallons) | Cylindrical And Cylindroids |  |  |
| :---: | :---: | :---: | :---: |
|  | Diameter |  | Height |
|  | Length | Width |  |
| *250 | --- |  | --- |
| *500 | --- |  | --- |
| 1,000 | 6 6" |  | 4'10" |
| 1,500 | 6 6' ${ }^{\prime \prime}$ |  | $7{ }^{\prime}$ 2" |
| 2,000 | $8{ }^{\prime} 0$ " |  | 5' ${ }^{\prime \prime}$ |
| 2,500 | $8^{\prime}{ }^{\prime \prime}$ |  | $7{ }^{\prime} 0$ " |
| 3,000 | $8{ }^{\prime} 0$ " |  | 8 ' 0 " |
| **3,500 | 11' 6" | 8' 0" | $6{ }^{\prime} 0$ " |
| **4,000 | 11' 6" | 8'0" | 7'0" |

* Various sizes and styles available.
** Oval shaped cylinders (cylindroid) Long and short diameters are provided.

Several factors are necessary in order to determine the required tank size. These include: the number of people using water from the tank, how much water they use per day, the roof area, and the extent and condition of the guttering system. All of these factors are necessary in order to determine the optimal tank size for your rainwater catchment system.

Following are four different examples of tank sizing problems that you might encounter. If these examples do not answer the questions you may have concerning design of you rain water catchment system, please contact the Water and Environmental Research Institute of the Western Pacific (WERI) for further information. The e-mail address, telephone, and fax numbers for WERI are provided at the end of this booklet.

## SIZING NEW TANKS

Here are the STEPS to use if you want to know how BIG to make a NEW tank.

STEP 1. Measure the LENGTH and WIDTH of your roof.

STEP 2. Find your ROOF SIZE.
Multiply Length times Width. Roof Size $=$ Length $x$ Width

## STEP 3. Select a ROOF FACTOR.

If the entire roof has gutters, use 1.0
If $3 / 4$ of the roof has gutters, use 0.75
If $1 / 2$ of the roof has gutters, use $\mathbf{0 . 5 0}$
If $1 / 4$ of the roof has gutters, use 0.25

## STEP 4. Select a GUTTER FACTOR.

If your gutter has only a few leaks, use 0.90

If your gutter has a number of leaks, use 0.75

If your gutter has a lot of leaks, use 0.60

STEP 5. Find your USEABLE ROOF SIZE.

Multiply Roof Size times Roof Factor times Gutter Factor.

Usable Roof Size $=$ Roof Size $x$ Roof Factor x Gutter Factor

STEP 6. Write down the NUMBER OF
PEOPLE that live in your home.
STEP 7. Use the CHARTS at the back of this booklet to get the size of your NEW tank.

## EXAMPLE ONE

Your roof is 45 feet in length by 40 feet wide. There are gutters around $3 / 4$ of your roof and they have very few leaks. There are 5 people in your family. How BIG should your NEW tank be? By following the steps on the previous page, we can fill in the blank spaces below.

Step 1. $\quad$| Length $\quad \mathbf{4 5}$ |
| :--- |
|  |
|  |
| Width |
| $\mathbf{4 0}$ |
| feet |
| feet |

Step 2. $\quad 45 \mathrm{ft} .{ }^{\mathbf{~}} \mathbf{4 0 \mathrm { ft } .}=\underline{1800} \mathrm{ft}^{2}{ }^{2}$ Size
Step 3. $\quad$ Roof Factor $=\mathbf{0 . 7 5}$
Step 4. $\quad$ Gutter Factor $=\underline{0.90}$
Step 5. $\quad \frac{\mathbf{1 8 0 0} \mathbf{~ f t . ~}^{2}}{\text { Roof Size }} \times \frac{\mathbf{0 . 7 5}}{\text { Roof Factor }} \times \frac{\mathbf{0 . 9 0}}{\text { Gutter Factor }}=\frac{\mathbf{1 2 1 5} \mathbf{~ f t . ~}^{2}{ }^{2}}{\text { Useable Roof Size }}$
$\begin{array}{ll}\text { Step 6. } \quad \mathbf{2} \text { People } & 3 / 4 \text { OF ROOF } \\ & \\ & \text { HAS } \\ & \text { GUTTERS }\end{array}$

Step 7. Go to the chart table for your useable roof size. Since your roof size is $\mathbf{1 2 1 5}$ square feet, you should use the chart labeled "For useable roof size of 1200 to 1400 square feet" which is on page 1 The same chart is shown below for easy reference. Locate the row labeled 2 people in the left-hand column.

FOR USABLE ROOF SIZE OF 1200 TO 1400 SQUARE FEET

|  |  | USAGEGALS / DAY / PERSON |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | PEOPLE | 1 | 4 | 20 | 30 |  |
|  | 20 | 1000 |  |  |  |  |
|  | 19 | 1000 |  |  |  |  |
|  | 18 | 1000 |  |  |  |  |
|  | 17 | 500 |  |  |  |  |
|  | 16 | 500 |  |  |  |  |
|  | 15 | 500 |  |  |  |  |
|  | 14 | 500 |  |  |  |  |
|  | 13 | 500 | 4000 |  |  |  |
|  | 12 | 500 | 3000 |  |  |  |
|  | 11 | 500 | 2500 |  |  |  |
|  | 10 | 250 | 2000 |  |  |  |
|  | 9 | 250 | 2000 |  |  |  |
|  | 8 | 250 | 1500 |  |  |  |
|  | 7 | 250 | 1000 |  |  |  |
|  | 6 | 250 | 1000 |  |  |  |
|  | 5 | 250 | 1000 |  |  |  |
|  | 4 | 250 | 500 |  |  |  |
|  | 3 | 250 | 500 |  |  |  |
| TWO PEOPLE | $\rightarrow 2$ | 250 | 250 | 2000 | $\lambda$ |  |
|  | 1 | 250 | 250 | $10 \mathrm{B0}$ | 1500 |  |
|  |  |  |  |  |  |  |
|  | $\begin{array}{r} \hline \mathrm{A} 25 \\ \text { will st } \\ \mathbf{4 g} \\ \mathbf{p} \\ \hline \end{array}$ |  |  | $\begin{gathered} \text { A } 2000 \text { ga } \\ \text { could suppl } \\ \mathbf{2 0} \text { gal / } \\ \text { perso } \end{gathered}$ | tank <br> up to <br> ay / | A use rate of 30 gal / day / person requires a tank larger than studied in this project. |

Color code legend:

| ROOF <br> TOO <br> SMALL | 250 <br> gal. | 500 <br> gal. | 1000 <br> gal. | 1500 <br> gal. | 2000 <br> gal. | 2500 <br> gal. | 3000 <br> gal. | 3500 <br> gal. | 4000 <br> gal. |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |

Step 7.(cont) There are three answers to the question of how BIG your NEW tank should be. First look again at the graph on the previous page. You will see that these answers are represented by four colored boxes to the right of the box that shows the number of people. These colored boxes tell you what size tank you need depending on the USE RATE you have decided on.
For example:

- A 250 gal tank can supply up to $\mathbf{4}$ gal / day / person. This $\mathbf{4}$ gal / day / person use rate is the normal amount of water used in Saipan for drinking, cooking, and washing dishes.
- A 2000 gal tank can supply up to 20 gal / day / person. This 20 gal / day / person use rate is the normal amount of water used in Saipan for drinking, cooking, washing dishes, and laundry or toilet flushing.
- For this roof size and number of people, the roof is too small to serve more that $\mathbf{2 0}$ gal / day / person.

Step 7. (cont.) An alternative means of determining your required tank size is to use the graphs shown on pages 18 through 21. An example of using these graphs is shown below. To use these graphs we must first choose our use rate and then go to the corresponding graph for our chosen rate. Our example graph is for a use rate of $4 \mathrm{gal} /$ day / person. This graph can be found on page 19 and is shown below for easy reference:

Step 1. Draw a horizontal line across the graph at a height corresponding to the number of people who are to be served by the tank.

Step 2. Draw a vertical line up from the usable roof size.
Step 3. The intersection of the vertical and horizontal lines falls in a color zone that indicates the required tank size. In our example the tank size required is 250 gallons.

## EXAMPLE TWO

Now suppose that your USABLE roof size is 1,620 square feet and 10 people are served by your tank. How big should your tank be now?

Since we already know the usable roof size and the number of people, we can go right to the chart to get an answer. Your usable roof size is between 1,600 and 1,800 square feet, so you would choose the chart located on page 16. A copy of part of this chart is shown below. The row labeled 10 people shows that a 250 gal tank will provide $1 \mathrm{gal} / \mathrm{day} /$ person and a 1500 gal tank will provide water at a rate of $4 \mathrm{gal} /$ day / person. The roof size is inadequate to provide a dependable supply of more than $4 \mathrm{gal} / \mathrm{day} /$ person for 10 people.

FOR USABLE ROOF SIZE OF 1600 TO 1800 SQUARE FEET

|  |  | USAGEGALS / DAY / PERSON |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  | PEOPLE | 1 | 4 | 20 | 30 |
|  | 20 | 1000 |  |  |  |
|  | 19 | 1000 |  |  |  |
|  | 18 | 500 |  |  |  |
|  | 17 | 500 |  |  |  |
|  | 16 | 500 | 4000 |  |  |
|  | 15 | 500 | 3500 |  |  |
|  | 14 | 500 | 3000 |  |  |
|  | 13 | 500 | 3000 |  |  |
|  | 12 | 500 | 2500 |  |  |
|  | 11 | 500 | 2000 |  |  |
| 10 PEOPLE | $\rightarrow 10$ | 250 | 1500 |  |  |
|  |  |  |  | tank up to ay / |  |

| ROOF <br> TOO <br> SMALL | GAL | G00 | GAL | GAL | G000 | GAL | 2000 | 2500 | 3000 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| GAL | GAL | GAL | GAL | GAL |  |  |  |  |  |

## IS THE TANK YOU ALREADY HAVE BIG ENOUGH?

The steps that you should follow if you want to know if your OLD tank is BIG enough are exactly the same as you used to determine the size of a NEW tank except that you will also have to find out the number of gallons of water that your tank will hold. Here's the additional step:

STEP 7. Find the SIZE of your tank (in gallons). See the sketch below for a description of the terms used.

Multiply 5.87 times height ( $f t$ ) times diameter (ft) times diameter ( $f t$ ).

$$
\text { Tank Size }=5.87 x_{\operatorname{Height}(f t)}^{x} \overline{\text { Diameter }(f t)}^{x} \overline{\operatorname{Diameter}(f t)}
$$

You will also have to use the charts in the back of the booklet in a slightly different way. This will be shown in Step 8 on the following page.

## RAIN WATER CATCHMENT TANK

## EXAMPLE THREE

Your roof is 42 feet long and 47 feet wide. You have gutters around the entire roof but they leak a lot. There are 8 people in your home. Your tank is 9.5 feet in diameter and 6 feet high. How much water can your tank dependably supply to your family?

Step 1. Length $=\underline{42}$ feet Width $=\underline{47}$ feet

Step 2.
$\frac{\mathbf{4 2} \mathbf{f t} .}{\text { Length }} \times \frac{\mathbf{4 7} \mathbf{f t} .}{\text { width }}=\frac{\mathbf{1 9 7 4} \mathrm{ft}^{2}{ }^{2}}{\text { roof size }}$

Your answer should be 1,974 square feet.
Step 3. $1.0 \quad$ roof factor
Step 4. $\quad \mathbf{0 . 6}$ gutter factor
Step 5. $\frac{\mathbf{1 9 7 4} \mathbf{~ f t . ~}^{\mathbf{2}}}{\text { roof size }} \times \frac{\mathbf{1 . 0}}{\text { roof factor }} \times \frac{\mathbf{0 . 6 0}}{\text { gutter factor }}=\frac{\mathbf{1 1 8 4} \mathbf{~ f t .}^{\mathbf{2}}}{\text { usable roof size }}$
Your answer should be approximately 1184 square feet.
Step 6. $\quad \mathbf{8}$ people
Step 7. $\quad 5.87 \times \underset{\text { height }}{\mathbf{6} \mathbf{f t}} \times \frac{9.5 \mathrm{ft} .}{\text { diameter }} \times \frac{\mathbf{9 . 5} \mathbf{f t}}{\text { diameter }}=\frac{\mathbf{3 1 7 9} \mathbf{~ g a l} .}{\text { tank size }}$
Your answer should be approximately 3,179 gallons.
Step 8. Now go to the chart for usable roof sizes between 1,000 and 1,200 square feet and look at the row for 8 people. Find the tank size listed in the farthest right row that is equal to or less than your tank size. In this example the tank size that is nearest to your size is 2000 gallons. This tells us that your tank will supply up to 4 gallons / day / person but is not large enough to meet the next higher use rate of 20 gals / day / person.

## EXAMPLE FOUR

Now suppose that you have a usable roof size of 500 square feet, a $1,000-\mathrm{gal}$ tank, and that there are 12 people in your household. How much water can your tank dependably supply?

Look at the chart for usable roof sizes between 400 and 600 square feet and the row of the chart corresponding to 12 people. The chart shows that the tank can supply a maximum dependable supply of 1 gal/day/person.

## HAVING TROUBLE??

The authors of this bulletin are hopeful that the procedures, charts and examples will help you in designing a new or evaluating an existing roof rainwater catchment system. If you are having trouble using the charts and examples or if your system does not seem to fit the charts provided, please contact the Commonwealth Utility Corporation (CUC) or contact Dr. Leroy Heitz at the address and numbers listed on the last page of this bulletin.
